ROSE HILL

NURSERY

CATALOGUE FALL 1909 SPRING 1910

Choice Trees, Plants, Vines, Shrubs, Etc.

Mrs. JENNIE B. BENNETT, Owner. S. DANIELS, Manager.

Scotland, Indiana

Homerly W.C. Bennett Deceased

THANKFUL to our friends and patrons for past favors, we have the pleasure to announce that the Rose Hill Nursesy is still actively engaged in business and solicit a share of your trade the coming season.

We have nothing to say against any other nursery, but claim for ourselves to be doing as clean, straight and honorable business as any nursery in the State of Indiana and will have a choice lot of Apple, Peach, Pear, Plum and Cherry, for the fall of 1909 and spring of 1910, of our own growing, and solicit the patronage of all our old customers and as many new ones as contemplate planting the coming season and guarantee satisfaction.

The State Entomologist's certificate will accompany each shipment.

ROSE HILL NURSERY,

Scotland, Indiana.

S. Daniels, Mgr.

MRS. J. B. BENNETT, Owner.

DESCRIPTIVE

APPLES

MAMMOTH BLACK TWIG OR PARAGON (also called Imp: oved Winesap)—The world is just beginning to find out what a prize it has in this wonderful apple. In 1893, the year of the great apple failure, "It bore perfect fruit in abundance when all others were nearly a failure." A Tennessee seedling—The original tree, over fifty years old, is still vigorous and bearing, though broken by storms. Thought to be a cross between Winesap and Red Limber Twig; combines the good qualities of both. Excels Winesap in almost every important point; a better and much stronger grower, hardier, and the fruit much larger, often measureing twelve inches in circumference; color or even darker red, flesh firmer, flavor milder, but fully equal. markably heavy and a long keeper. W. G. Vincenheller, Ark, Com. of Agriculture and Pres. Ark, Hort, Society, writes: "In high favor here. An excellent bearer and begins to bear two years after planted. Each year convinces me more and more of its value. Somewhat like winesap, but much larger, darker; very fine table fruit. Remarkable keeper. Hangs its fruit well." The Mammoth Black Twig was the finest apple exhibited at the Buffalo Exposition, and was admired by thousands.

ROCKY MOUNTAIN PIPPIN—It would be difficult, we think, to find a better fall apple than the Rocky Mountian Pippin. The fruit is large, red and covered with small minute dots or specks, and is very attractive in appearance. In quality it is excellent, and is also highly perfumed, making it altogether an apple, we think, that will please the taste of anyone who is a lover of

this kind of fruit. The tree is hardy and is a good grower, aed also a good bearer, and we think will give satisfaction to all who are so fortunate as to plant this variety.

Geiger.—This apple was brought to this state in 1837, by Mr. Geiger, and is supposed to be a seedling. It keeps fresh and sound until the 20th of July. In quality it cannot be beat by any apple at any season of the year. The tree is as hardy as the wild crab, bears every year, and never stops, drops or rots. It you want an apple that is better than any apple in your neighborhood, we advise you to plant the Geiger. A great many apples loose their flavor when spring comes, but not so with the Geiger, as it retains its rich flavor in the spring when a great many varieties of apples have become almost tasteless, making it an apple unsurpassed for home use on account of its fine flavor and excellent keeping qualities.

PEARS

Henry—Grown from French pear seed, planted in the spring of 1871, by Henry C. Henry, of Effingham County, Ill. Commenced bearing in 1877 or 1878. Has never shown any sign of leaf or twig blight. It is a regular and abundant bearer, and in quality has no superior, if an equal among the good keeping winter pears. Resembles Barlett very much in size, shape and flavor. Is a good keeper, a rich yellow in color, and without a peer in quality among the winter pears. A good grower in nursery.

PEACHES

MILLER'S CLING—Orginated in Holmes County, Ohio. Tree a vigerous grower, healthy and hardy, standing several degrees more frost than most of the other kinds. Productive, does not overbear, brings every fruit to perfection, and sets enough to produce a full crop. Fruit is large, perfect in form and color; one of the most beautiful; flesh golden yellow, very sweet; pits never burst. Will keep two weeks in an ordinary room with no sign of rot or decay. It can be shipped to Europe in good condition. We think no peach yet introduced of anything like handsome appearance or good quality of Miller's Cling, can compare with it in keeping qualities. The best shipping peach, and we think, will prove one of the most profitable market varieties. Middle of September.

Starr—This seedling was found in an old orchard on the Buchanan farm in St. Louis. It attracted much deserved attention on account of its extremely large size, handsome appearance and late ripening, when all others were gone. Bore a full crop, selling at highest prices in the St, Louis market. Color rich yellow, with brilliant red cheek; perfect freestone; juicest of rich juice. Ripens about first of October, and can be kept a long time. Quality the very best. Blooms late, thus escaping the early spring frosts. We consider it the most valuable acquisition to our list of peaches and worthy of extensive planting.

Holderbaum—The introducers of this new peach, after calling it the "Giant of the Alleghanies," make the following claims: "On account of the peculiar style of blossom it is not affected by the heavy spring frosts like other varieties." They also claim it to be of ironclad hardiness. They give the following description of the fruit: "The size of the natural fruit is immense, many specimens measuring from twelve to fourteen inches in circumference. In color it is of a light creamy yellow with a beautiful red cheek on the sunny side.

In texture it is very firm, of fine quality and a perfect freestone. The pit is very small and the flesh light yellow, streaked with red from the surface to the center and of the most exquisite flavor."

SUMMER SNOW CLING—One of the best penches for canning. Far more delicious than Heath Cling, and ripens a month earlier; of special value along the northern borders of the peach belt—a snowy white cling, clear white to the pit.

CHERRY

Baldwin—Large, round, slightly sub-acid, sweetest and richest of the Morello type. A fine upright grower, remarkable for earliness, hardiness and productiveness. Ripens in June.

RASPBERRIES

Kansas—Strong, vigorous grower, standing extremes of drouth and cold, and bearing immense crops. Early, ripening just after Palmer. Berries size of Gregg, of better quality; jet black and almost free from bloom; firm, of best quality; presents a handsome appearance, and brings highest prices in market. Every planter who wants a prolific, hardy, early berry of immense size handsome appearance and superb quality, should plant it.

Cumberland—The largest black Raspberry known, has been well tested in nearly all sections the past season, giving thorough satisfaction. In hardiness and productiveness it is unexcelled by any other variety. In size the fruit is simply enormous, far surpassing any other sort. The berries run seven-eights and fifteen-sixteenths of an inch in diameter, and are of such a handsome appearance that their fruit sold for 10c per quart when other varieties were selling for 5c to 7c per quart. The quality is very similar and fully equal to

Gregg. In spite of its unusually large size, the fruit is possessed of great firmness and is thus well adapted for standing long shipments. It follows Palmer and Souhegan and precedes Gregg a short time, making it a mid-season variety. The bush is exceedingly healthy and vigororous, throwing up stout stocky canes, well adapted for supporting their load of large fruit. Large growers report yields of two or three times as much per acre as Ohio, under same conditions, and far ahead of all other varieties.

QUINCES

MISSOURI MAMMOTH—The largest and best quince grown. Very hardy and productive; fruit of large size, often weighing twenty to twenty-four ounces. A rich golden yellow, ripening just ahead of the orange, but keeps well. Flesh fine and exceedingly tender, cooking as nicely as an apple, and with an exceedingly mild, pleasant flavor. Brings highest prices in the market.

SPIREAS

Van Houte—The grandest of all the spireas; it is a beautiful ornament for the lawn at any season, but when in flower it is a complete fountain of white bloom, the foliage hardly showing. Clusters of twenty to thirty flat, white florets make up the raceme, and these clusters are set close along the drooping stems. Perfectly hardly and an early bloomer.

New Crimson Spirea. Anthony Waterer—This beautiful, new crimson-flowered spirea was introduced a few years ago, and previous to its introduction, Mr. Goldring, of the famous Kew Gardens, said: "It is one of those exceptional novelties that occur only at rare intervals, adding in a conspicous way to the rich and varied flora of our gardens.

It outshines all the spireas in brilliancy of color—a bright crimson. It is a rare gem." It makes a low compact bush fifteen to eighteen inches high, and is covered nearly the whole growing season with large umbels of deep crimson flowers, which measures nearly a foot across.

When scarcely three inches high it begins to bloom and thereafter is seldom out of flower. As a pot plant for growing in the open ground nothing can equal it. Perfectly hardy; it is unquestionably one of the really meritorious plants that we cannot have too many of.

CLEMATIS PANICULTA

Japanese Virgin's Bower-One of the most beautiful of our hardy flowering vines. The flowers are pure white; and are borne in large panicles or clusters of bloom, fairly covering the plant, so that it is a mass or sheet of fleecy white. The clusters are borne on long, slender stems, which stand out boldly from between the glossy green leaves, and the gentlest breeze causes wavy crests of white to flow gently over the surface. The fragrance is delicious, resembling the English Hawthorne blossoms. It is a strong rapid grower, quickly reaching a height of from fifteen to twenty feet, and spreading out when trained to wires or strings. It is perfectly hardy in all sections of the country, and we can unhesitatingly say that it is, in our opinion, the most valuable among hardy climbing vines.
